## Understanding the Basics of LED 8x8 Dot Matrix

### What Is an 8x8 LED Dot Matrix?

An 8x8 LED dot matrix is a grid of 64 LEDs arranged in rows and columns. Each LED acts as a pixel that can be turned on or off, allowing images, text, or animations to be displayed. The matrix is typically driven by a combination of multiplexing techniques to reduce the number of I/O pins required for control.

### How Does It Work?

The matrix functions by scanning through each row or column rapidly, lighting the appropriate LEDs in sequence. This process, called multiplexing, creates the illusion that the entire display is lit simultaneously. Microcontrollers such as Arduino, Raspberry Pi, or ESP32 are commonly used to control these matrices through driver ICs like MAX7219, HT16K33, or directly via GPIO pins.
