Types of Wall Structures in Designmag

Understanding the different types of wall structures is crucial for selecting the right system for a project. The main types include:

Load-Bearing Walls

These walls support vertical loads from the roof and upper floors. They are typically constructed from brick, concrete, or reinforced masonry and are integral to the building's structural system.

Partition Walls

Primarily used to divide interior spaces, partition walls are non-load bearing and often lightweight, such as drywall or timber frames. They offer flexibility in interior design.

Shear Walls

Designed to resist lateral forces caused by wind or earthquakes, shear walls are reinforced and strategically placed to enhance building stability.

Exterior Walls

These form the building's envelope, providing insulation, weather resistance, and aesthetic appeal. They often combine structural elements with cladding materials.
