- Triggered by user actions such as field changes, form open/close events.
- Used for real-time validation, dynamic field visibility, or populating dependent fields.
- Written in Remedy's proprietary scripting language.
- Example: When a user selects a specific category, an active link displays additional fields relevant to that category.

Filters:

- Server-side scripts executed on the AR System server.
- Triggered by database events such as record create, modify, or delete.
- Used for data validation, record manipulation, notifications, and process automation.
- More powerful as they can perform complex logic and interact with multiple forms.
- Example: Automatically assign a ticket to a technician when a new incident is created with a specific priority.

Differences summarized:

Aspect	Active Links	Filters
--------	--------------	---------

--	--	--

Execution Layer	Client-side	Server-side
-----------------	-------------	-------------

Triggered By	User actions	Database events
--------------	--------------	-----------------

Typical Use	UI validations, dynamic UI changes	Data validation, workflow automation
