- **Screwdriver:** Used for screwing or unscrewing screws.
- **Chisel:** Used for carving or cutting wood or other materials.

Question 3: Explain the function of a resistor in an electrical circuit.

Answer:

A resistor is a passive electronic component that limits or regulates the flow of electrical current within a circuit. It provides resistance, which helps control voltage and current levels, protecting other components and ensuring the circuit operates safely and efficiently.

Question 4: What is the purpose of a pulley in mechanical systems?

Answer:

A pulley is a simple machine used to change the direction of a force applied to lift or move loads. It can also reduce the effort needed to lift heavy objects by providing a mechanical advantage, especially when used in combination with other pulleys in a system.

Question 5: Describe the difference between a series and a parallel electrical circuit.
